

TREATMENT OF HYPOGLYCAEMIA

If at any time, Finley is very drowsy, please contact parents straight away. In the unlikely event that he loses consciousness, do not give anything by mouth. Place him in the recovery position and call for an ambulance immediately then contact parents immediately after. Symptoms of hypoglycaemia include pale appearance, feeling hungry or tired, mood changes, feeling hot, shaky, weak or drowsy. At no point should Finley be sent to find a member of staff on his own if his blood sugar is low. This causes blood sugar to drop even further which could cause disorientation / sudden collapse.
